

OBSERVATIONS:

Yellow sticky note area for observations.

Plan:

Four horizontal lines for planning.

Prepare & Maintain:

Seven horizontal lines for preparation and maintenance notes.

Plant:

Four horizontal lines for planting notes.

Harvest:

Four horizontal lines for harvest notes.

SOW & PLANT BY ZONE

While colder zones may not be able to actively plant outdoors during January, milder climates still have the go-ahead.

Zones 7-10 can plant asparagus crowns and strawberry transplants, and set out transplants of broccoli, cabbage, spinach, lettuce, dill, parsley, cilantro, and chervil. Direct sow seeds of arugula, beets, bok choy, carrots, fennel, radishes, turnips, and peas.

Zones 9-10 can purchase seed potatoes and pre-sprout them for spring planting.

INDOORS

All zones can enjoy indoor houseplant gardening. Zones 4-6 can plant microgreens on their kitchen countertop to enjoy in winter salads.

Zones 7-8 can start cauliflower, cabbage, broccoli, and lettuce seeds.

HARVEST BY ZONE

Zones 4-6 can dig parsnips left in the ground over winter.

Zones 7-10 can harvest loads of greens and veggies including broccoli, arugula, cabbage, Brussels sprouts, cauliflower, collards, fennel, spinach, Swiss chard, radishes, leeks, kale, green onions, and mustard.
